 LinkedIn  GitHub  LeetCode

Technical Skills

- **Programming Languages:** Java, JavaScript
- **Frameworks & Backend:** Spring Boot, Spring Cloud, Spring Data JPA, Hibernate, Microservices, REST APIs, Design Patterns, System Design, Multithreading, API Gateway, Distributed Systems
- **Security:** Spring Security, JWT, OAuth2, Okta, MFA
- **Databases & Messaging:** SQL (MySQL, PostgreSQL), Apache Kafka, Redis
- **Cloud & DevOps:** Docker, Kubernetes, Jenkins, CI/CD, AWS (SES, IAM)
- **Tools:** Maven, Gradle, OpenAPI (Swagger), SonarQube, Splunk, Git, GitHub Copilot

Experience

Sun Life Global Solutions

Software Developer

April 2026 – Present

- Architected secure backend services using **Spring Boot**, **Backend-for-Frontend (BFF)** pattern, and **Okta M2M authentication**, **reducing API response time from 4s to 3s** through payload optimization for web and mobile clients.
- Designed **Kafka-based event-driven microservices** to process **1,000+ business notifications daily**, improving horizontal scalability, fault tolerance, and asynchronous event processing.
- Automated **CI/CD deployment pipelines** using **Jenkins**, **Docker**, and **Kubernetes**, **reducing deployment time by 25%** and enabling faster, reliable releases across environments.
- Selected for an **international onsite assignment** in the **Philippines** to **drive SIT/UAT readiness**, **coordinate cross-functional stakeholders**, and ensure successful delivery of business-critical production releases.

Associate Software Developer

Jul 2022 – Mar 2026

- Developed secure **RESTful APIs** using **Spring Boot**, **OAuth2**, **JWT**, and **MFA authentication** for enterprise applications.
- Optimized SQL queries and indexing strategies, **reducing average API response time from 600ms to 500ms** for advisor-facing workflows.
- Built a **centralized rules-driven reporting platform** with scheduled batch jobs, reducing manual reporting effort by **23% across 3 advisor-facing applications**.
- Enhanced application reliability through **centralized exception handling**, **structured logging**, and automated testing using **JUnit**, **Mockito**, and **JaCoCo**, improving defect detection during release cycles.
- Modernized **React and Ionic** campaign management applications, accelerating feature delivery and improving campaign execution efficiency in **Agile teams**.

Projects

Scalable Microservices Platform (Spring Boot, Kafka, Observability) (GitHub)

- Engineered a cloud-native platform with **JWT-based authentication**, **refresh-token support**, **centralized API Gateway routing**, and role-based access control.
- Orchestrated **Kafka-driven asynchronous communication** and **AWS SES notification workflows**, enabling reliable event processing across loosely coupled services.
- Improved service resilience and fault tolerance using **Resilience4j circuit breakers** and **retry mechanisms**, minimizing the impact of downstream dependency failures.
- Established end-to-end **observability** using **Prometheus**, **Grafana**, **Loki**, and **Tempo** for **metrics monitoring**, centralized logging, and distributed tracing.

News Aggregator System (React, Spring Boot, Redis, WebSocket) (GitHub)

- Implemented a scalable news aggregation platform integrating multiple external providers through **Aggregator and Strategy design patterns** for unified content delivery.
- Reduced API latency using **Redis caching** and **parallel API execution** with **ExecutorService**, improving throughput under concurrent workloads.
- Enabled real-time content distribution through **WebSocket**, **STOMP**, and **SockJS integration**, eliminating frequent client polling and improving user experience.

Education

Ajay Kumar Garg Engineering College

B.Tech, Information Technology; CGPA: 7.8

Ghaziabad, UP

Aug 2017 - Jun 2021
