## Technical Skills

- **Programming Languages:** Java 8–21, JavaScript
- **Frameworks & Backend:** Spring Boot, Spring Cloud, Spring Data JPA, Hibernate, Microservices, REST APIs, Design Patterns, System Design, Multithreading, API Gateway, Distributed Systems
- **Security:** Spring Security, JWT, OAuth2, Okta, MFA
- **Databases & Messaging:** SQL (MySQL, PostgreSQL), Apache Kafka, Redis
- **Cloud & DevOps:** Docker, Kubernetes, Jenkins, CI/CD, AWS (SES, IAM)
- **Tools:** Maven, Gradle, OpenAPI (Swagger), SonarQube, Splunk, Git, GitHub Copilot

## Experience

### Sun Life Global Solutions

#### Software Developer

Apr 2026 – Present

- Architected secure backend services using the **Backend-for-Frontend (BFF) pattern** and **Okta M2M authentication**, reducing API response time from **4s to 3s** through payload optimization for web and mobile clients.
- Designed **Kafka-based event-driven microservices** to process **1,000+ business notifications daily**, decoupling notification processing from synchronous application workflows.
- Automated **CI/CD deployment pipelines** using **Jenkins, Docker and Kubernetes**, reducing deployment time by **25%** and standardizing releases across environments.
- Coordinated **SIT/UAT readiness and production releases** during an **onsite assignment in the Philippines**, collaborating with cross-functional teams to validate business requirements and resolve release blockers.

#### Associate Software Developer

Jul 2022 – Mar 2026

- Developed secure **RESTful APIs** using **Spring Boot, OAuth2, JWT and MFA authentication** for enterprise applications.
- Optimized **SQL queries and indexing strategies**, reducing average API response time from **600ms to 500ms** for advisor-facing workflows.
- Built a **centralized rules-driven reporting platform** with scheduled batch jobs, reducing manual reporting effort by **23%** across **3 advisor-facing applications**.
- Strengthened application reliability through **centralized exception handling, structured logging**, testing and code coverage with **JUnit, Mockito and JaCoCo**, improving defect detection during release cycles.
- Modernized campaign scheduling interfaces using **React and Ionic**, delivering web and mobile features through **Agile sprints**.

## Projects

### Event-Driven Incident Observability Platform (Spring Boot, Kafka, PostgreSQL, Grafana) (*GitHub*)

- Consolidated **Prometheus metrics, Loki logs and Tempo traces** into persistent reports triggered by **Alertmanager webhooks**, centralizing evidence for **incident investigation**.
- Implemented a **transactional outbox** with **Kafka publication retries** to retain events during broker outages; **deduplicated repeated alerts using fingerprints**.
- Structured **PostgreSQL incident history** with **paginated APIs, Flyway migrations** and scheduled retention policies for report and event lifecycle management.
- Configured **Grafana dashboards and email notifications**; used **Docker Compose and failure-injection scenarios** to validate incident detection and resolution.

### AI-Powered News Intelligence Platform (React, Spring Boot, Redis, Gemini) (*GitHub*)

- Unified **Guardian and NYT REST APIs** using **Strategy and Adapter patterns** with normalized article data, **URL-based deduplication** and partial-failure handling.
- Parallelized upstream requests using **Java 21 virtual threads** and **CompletableFuture**, with per-provider timeouts and **Redis cache-aside** to reduce repeated API calls.
- Integrated **Google Gemini API** for **source-grounded news summaries, article Q&A** and **cross-publisher coverage comparison**, with **TTL-based response caching** and a configurable **AI feature flag**.

## Education

Ajay Kumar Garg Engineering College  
B.Tech, Information Technology; CGPA: 7.8

Ghaziabad, UP  
Aug 2017 – Jun 2021
